

Art and Design

Pupils who are talented in Art and Design are likely to:

a) Think and express themselves in creative and original ways.

They tend to want to follow a different plan to the other students, challenge the tasks given, or extend the brief in seemingly unrelated or fantastic directions.

b) Have a strong desire to create in a visual form.

They tend to be driven by ideas, imagination, flights of fancy, humanitarian concerns, humour or personal experience; they tend to persevere until they have completed a task successfully, with little or no intervention from the teacher.

c) Push the boundaries of normal processes.

They tend to test ideas and solve problems relating to concepts and issues; they explore ways to depict ideas, emotions, feelings and meanings; they may take risks without knowing what the outcome would be or change ideas to take into account new influences or outcomes.

d) Show a passionate interest in the world of art and design.

They are often interested in a specific culture (possibly relating to their own cultural background or sense of identity), particular art forms, contemporary culture or youth culture.

e) Use materials, tools and techniques skillfully and learn new approaches easily. They are keen to extend their technical abilities and sometimes get frustrated when other skills do not develop at the same time.

f) Initiate ideas and define problems.

They tend to explore ideas, problems and sources on their own and collaboratively, with a sense of purpose and meaning.

g) Critically evaluate visual work and other information. They can make unusual connections between their own and others work; can apply ideas to their own work in innovative ways.

h) Exploit the characteristics of materials and processes. They can use materials and processes in creative, practical and inventive ways; they may explore alternatives and respond to new possibilities and meanings.

i) Understand that ideas and meanings in their own and others' work can be interpreted in different ways.

They can use their knowledge and understanding to extend their own thinking and realise their intentions; they can communicate original ideas, insights and views.
